EDUCATION

Georgia Institute of Technology

Master of Science in Computer Science, Computing Systems

Relevant Coursework: Data Structures & Algorithms, Machine Learning, System Design

Atlanta, GA

May 2027

GPA: 4.0/4.0

EXPERIENCE

Software Engineer Intern

NCR Voyix

May 2026 – Present

Atlanta, GA

- Refactored metrics GraphQL APIs in Go, reducing average query response times by **25%** (200ms → 150ms) across production services.
- Designed and implemented an agentic skills framework leveraging GitHub Copilot, GPT, and Claude, enabling dynamic sub-agent creation and task delegation; introduced folder-scoped Markdown context files consolidating monorepo context, reducing token consumption by **45%** and deployed to production across the engineering team.
- Configured Kubernetes controllers to manage container image lifecycle across distributed store clusters, supporting reliable backend deployments at scale.

Research Assistant

Georgia Institute of Technology

April 2025 – Present

Atlanta, GA

- Developed a computer vision pipeline to estimate gestational weight gain from clinical and publicly sourced image data, implementing deep learning models with OpenCV for real-time inference, targeting deployment for maternal health screening across Sub-Saharan Africa.
- Engineered fairness-aware model evaluation using TIDE-based identity annotation, enabling bias detection and counterfactual analysis across demographic attributes to ensure equitable model performance across diverse patient populations.

Software Engineer Intern

Centene Corporation

May 2025 – December 2025

St. Louis, Mo

- Built and deployed a large-scale file ingestion pipeline using Spring Boot, AWS S3, Step Functions, and DynamoDB, processing multi-GB uploads with parallelization and automated routing to FileNet, reducing latency by **35%**.
- Automated end-to-end file processing workflow including SFTP transfer, metadata generation, API integration, and scheduled status polling using AWS EventBridge and Secrets Manager, ensuring document lifecycle management.
- Designed and implemented **cloud-native** API auth framework with Spring Boot, OAuth 2.0/JWT, and Axway Gateway, integrating CyberArk for credential management and Radiant Logic for AD group-to-scope mapping.
- Implemented a CI/CD-ready microservice with automated token issuance/validation and Entra Key integration.

PROJECTS

Trade Lens | github.com/sid8285/tradelens

January 2025

- Collaborated and deployed a full-stack web platform for real-time stock analysis, leveraging TypeScript, Python, Turso DB, and GCP; scaled pipelines to ingest and aggregate **1,000+** community posts/comments daily.
- Integrated AI-driven sentiment analysis by aggregating and summarizing data from online communities such as Reddit leaving further expansion for different sources of info.
- Implemented data pipelines to fetch, analyze, and store trending market discussions and sentiment, delivering actionable insights on stocks which were displayed on interactive dashboards for users.

SwitchDetect | Python, OpenCV, YOLOv3, Twilio

October 2024

- Creating live object detection system using OpenCV & YOLOv3 that detects Switch controller with **70%** accuracy.
- Integrated Twilio API to send automated SMS notifications within 2 seconds of detecting the controller.
- Improved detection accuracy by **20%** using non-max suppression to reduce overlapping bounding boxes.
- Optimized for scalability, enabling potential expansion to detect additional distractions through custom training.

TECHNICAL SKILLS

Languages: Python, Java, Go, C, C++, SQL, JavaScript, HTML/CSS, Swift

Cloud/Backend: AWS, Spring Boot, Node.js, Express.js, Google Cloud Platform, Kubernetes

ML/CV: TensorFlow, Keras, OpenCV, YOLOv3

Frontend: React.js, SwiftUI
