EDUCATION

Georgia Institute of Technology

Master of Science in Computer Science, Computing Systems

Relevant Coursework: Data Structures & Algorithms, Machine Learning, System Design

Atlanta, GA

May 2027

GPA: 4.0/4.0

Georgia Institute of Technology

Bachelor of Science in Computer Science, Artificial Intelligence

Atlanta, GA

May 2026

GPA: 3.6/4.0

EXPERIENCE

Software Engineer Intern

NCR Voyix

May 2026 – August 2026

Atlanta, GA

- Designed and implemented an **agentic AI** skills framework leveraging **LLMs (GPT, Claude)** and **GitHub Copilot**, enabling dynamic sub-agent creation and task delegation; introduced folder-scoped Markdown context files consolidating monorepo context, reducing token consumption by 56% and deployed to production.
- Refactored metrics **GraphQL** APIs in **Go (Golang)**, reducing average query response times by 25% (200ms → 150ms) across production services.
- Configured **Kubernetes** controllers to manage container image lifecycle across distributed store clusters, supporting reliable backend deployments at scale.

Research Assistant

Georgia Institute of Technology

April 2025 – Present

Atlanta, GA

- Developed a **computer vision** pipeline to estimate gestational weight gain from clinical and publicly sourced image data, implementing **deep learning** models with **OpenCV** for real-time inference, targeting deployment for maternal health screening across Sub-Saharan Africa.
- Engineered fairness-aware **model evaluation** using TIDE-based identity annotation, enabling bias detection and counterfactual analysis across demographic attributes to ensure equitable model performance across diverse patient populations.

Software Engineer Intern

Centene Corporation

May 2025 – December 2025

Saint Louis, MO

- Built and deployed a large-scale file ingestion pipeline using **Java**, **Spring Boot**, **AWS S3**, **Step Functions**, and **DynamoDB**, processing multi-GB uploads and routing to FileNet, reducing latency by 35%.
- Automated end-to-end file processing workflow including SFTP transfer, metadata generation, API integration, and scheduled status polling using **AWS EventBridge** and **Secrets Manager** to manage full document lifecycle.
- Designed and implemented cloud-native API auth framework with **Spring Boot**, **OAuth 2.0/JWT**, and Axway Gateway, integrating **CyberArk** for credential management and Radiant Logic for AD group-to-scope mapping.
- Implemented a **CI/CD-ready microservice** with token issuance/validation and Entra Key integration.

Software Engineer Intern

World Wide Technology

May 2024 – April 2025

Saint Louis, MO

- Built automated cleanup utilities in **PowerShell** on **Microsoft Azure** to retire M365 applications unused 5+ years, containerizing services with **Docker** for scalable cloud deployment; scoped data retention, dry-run design, exception handling, and alerting with team leads and senior engineers.
- Wrote integration tests validating cleanup behavior and authored an **Ansible** playbook to deploy the utility to an Azure Virtual Machine.

PROJECTS

Trade Lens | TypeScript, Python, MySQL, GCP | github.com/sid8285/tradelens

January 2025

- Built a full-stack real-time stock sentiment platform ingesting and AI-summarizing 1,000+ Reddit posts daily.

TECHNICAL SKILLS

Languages: Python, Java, Go, C, C++, SQL, JavaScript, HTML/CSS, Swift

Cloud/Backend: AWS, Spring Boot, Node.js, Express.js, Google Cloud Platform, Kubernetes, MySQL

ML/CV: TensorFlow, Keras, OpenCV, YOLOv3

Frontend: React.js, SwiftUI
