Education

Georgia Institute of Technology — Atlanta, GA
Master of Science in Computer Science, Computing Systems — *May 2027*
Relevant Coursework: Data Structures & Algorithms, Machine Learning, System Design — *GPA: 4.0/4.0*

Georgia Institute of Technology — Atlanta, GA
Bachelor of Science in Computer Science, Artificial Intelligence — *May 2026*
GPA: 3.6/4.0

Experience

Software Engineer Intern — May 2026 – August 2026
NCR Voyix — *Atlanta, GA*

- Designed and implemented an **agentic AI** skills framework leveraging **LLMs (GPT, Claude)** and **GitHub Copilot**, enabling dynamic sub-agent creation and task delegation; introduced folder-scoped Markdown context files consolidating monorepo context, reducing token consumption by 56% and deployed to production.
- Refactored metrics **GraphQL** APIs in **Go (Golang)**, reducing average query response times by 25% (200ms → 150ms) across production services.
- Configured **Kubernetes** controllers to manage container image lifecycle across distributed store clusters, supporting reliable backend deployments at scale.

Research Assistant — April 2025 – Present
Georgia Institute of Technology — *Atlanta, GA*

- Developed a **computer vision** pipeline to estimate gestational weight gain from clinical and publicly sourced image data, implementing **deep learning** models with **OpenCV** for real-time inference, targeting deployment for maternal health screening across Sub-Saharan Africa.
- Engineered fairness-aware **model evaluation** using TIDE-based identity annotation, enabling bias detection and counterfactual analysis across demographic attributes to ensure equitable model performance across diverse patient populations.

Software Engineer Intern — May 2025 – December 2025
Centene Corporation — *Saint Louis, MO*

- Built and deployed a large-scale file ingestion pipeline using **Java, Spring Boot, AWS S3, Step Functions**, and **DynamoDB**, processing multi-GB uploads and routing to FileNet, reducing latency by 35%.
- Automated end-to-end file processing workflow including SFTP transfer, metadata generation, API integration, and scheduled status polling using **AWS EventBridge** and **Secrets Manager** to manage full document lifecycle.
- Designed and implemented cloud-native API auth framework with **Spring Boot, OAuth 2.0/JWT**, and Axway Gateway, integrating **CyberArk** for credential management and Radiant Logic for AD group-to-scope mapping.

Software Engineer Intern — May 2024 – April 2025
World Wide Technology — *Saint Louis, MO*

- Built automated cleanup utilities in **PowerShell** on **Microsoft Azure** to retire M365 applications unused 5+ years, containerizing services with **Docker** for scalable cloud deployment; scoped data retention, dry-run design, exception handling, and alerting with team leads and senior engineers.
- Wrote integration tests validating cleanup behavior and authored an **Ansible** playbook to deploy the utility to an Azure Virtual Machine.

Projects

BORD | Python, Qwen3-VL, Stripe, FastAPI, TypeScript | github.com/sid8285/BORD — September 2026 - Present

- Built a full-stack commitment-stakes app using Stripe authorize-and-capture holds and Qwen3-VL photo verification of task completion, hardened against fraud attack types.

Technical Skills

Languages: Python, Java, Go, C, C++, SQL, TypeScript/JavaScript, HTML/CSS, Swift
Cloud/Backend: AWS, FastAPI, Spring Boot, Node.js, Express.js, Google Cloud Platform, Kubernetes, MySQL
ML/CV: TensorFlow, Keras, OpenCV, YOLOv3
Frontend: React.js, SwiftUI
